IELTS Writing Test

Task 1: Report Writing (Academic)

Instructions:

You should spend about 20 minutes on this task.

The chart below shows the percentage of people in three different countries who owned a smartphone from 2010 to 2020.

Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

(If needed, I can generate a graph or provide detailed data for a more authentic experience.)

Task 1: Letter Writing (General Training)

Instructions:

You should spend about 20 minutes on this task.

You recently bought a product online but were not satisfied with your purchase. Write a letter to the company. In your letter:

- describe the problem with the product
- explain why you are not happy with it
- say what you would like the company to do

Write at least 150 words.

Task 2: Essay Writing (Same for Academic & General Training)

Instructions:

You should spend about 40 minutes on this task.

Some people think that technological advancements are making people less social. Others believe technology helps people maintain and strengthen social connections.

Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Sample Answers and Assessment Tips for IELTS Writing Tasks

Task 1 (Academic Sample Answer)

The chart illustrates the percentage of people owning smartphones in three countries — the USA, Japan, and Germany — from 2010 to 2020.

Overall, the trend shows a steady increase in smartphone ownership across all three countries, with the USA consistently leading and Japan lagging behind for most of the period.

In 2010, only about 30% of Americans owned smartphones, while Germany and Japan stood at 25% and 15%, respectively. By 2015, smartphone ownership had surged to nearly 70% in the USA, surpassing Germany, which climbed to 60%. Japan saw a more moderate increase to 40%.

By 2020, all three countries had seen substantial growth, with the USA reaching 90% ownership, followed by Germany at 85% and Japan at 75%. Despite its initial slow adoption, Japan showed a steady upward trajectory throughout the decade.

In conclusion, while the growth rates varied, all three countries witnessed a significant rise in smartphone ownership between 2010 and 2020.

Assessment Tips:

- **Task Achievement:** Include key comparisons and trends.
- **Coherence and Cohesion:** Use linking words like *however*, *while*, and *in contrast*.
- **Lexical Resource:** Use varied vocabulary (e.g., *surge*, *trajectory*, *ownership*).
- **Grammar:** Use passive voice and complex sentence structures when needed.

Task 1 (General Training Sample Answer)

Dear Customer Service Team,

I am writing to express my dissatisfaction with a product I recently purchased from your online store. The order number is #123456.

I bought a pair of wireless headphones advertised as having excellent sound quality and a long battery life. Unfortunately, the product did not meet these expectations. The audio frequently cuts out, even when the headphones are fully charged. Additionally, the battery lasts only two hours instead of the advertised eight hours.

This has caused significant inconvenience, as I intended to use these headphones for work and travel.

I would appreciate it if you could either replace the defective product or issue a full refund. Please let me know how I can proceed with returning the item.

Thank you for your attention to this matter.

Sincerely,
Jonathan Brown

Assessment Tips:

- **Task Achievement:** Ensure you address all three bullet points.
- **Coherence:** Maintain a polite and structured tone.
- **Lexical Resource:** Use polite phrases (e.g., *I would appreciate, please let me know*).
- **Grammar:** Use formal language and a variety of sentence structures.

Task 2 (Essay Sample Answer)

Essay Prompt: *Some people think that technological advancements are making people less social. Others believe technology helps people maintain and strengthen social connections. Discuss both views and give your opinion.*

Sample Answer:

The role of technology in shaping social relationships is a topic of ongoing debate. While some argue that it isolates individuals, others believe it fosters stronger connections.

On one hand, critics assert that technology, particularly social media, has diminished face-to-face communication. People often spend hours scrolling through their phones rather than engaging in meaningful conversations. This behavior can lead to feelings of loneliness and social disconnection. For example, studies have shown that heavy social media usage is correlated with increased anxiety and depression.

On the other hand, technology has made it easier to maintain relationships across distances. Video calls, messaging apps, and social networks enable people to stay connected despite physical separation. For instance, families living in different countries can now communicate effortlessly and frequently, which was not possible a few decades ago.

In my opinion, whether technology enhances or hinders social interactions depends on how it is used. When leveraged thoughtfully, it can complement face-to-face interactions rather than replace them.

In conclusion, while technology poses certain risks to social engagement, its benefits in fostering long-distance connections are undeniable. A balanced approach is key to reaping its advantages while minimizing its downsides.

Assessment Tips:

- **Task Response:** Present a clear opinion and cover both views.
- **Coherence and Cohesion:** Use transition words like *on the other hand*, *for instance*, *in conclusion*.
- **Lexical Resource:** Include a mix of formal terms (*correlated*, *leverage*) and precise language.
- **Grammar:** Use complex sentences with accurate punctuation and tenses.
